

**ABSTRACT**

The present invention relates to a system for providing location information using a mobile communication network, and more particularly, to a system for providing 5 emergency relief location information using a mobile communication network, by which location and situation information of a mobile communication subscriber can be easily known through the mobile communication network using the mobile communication terminal. An object of the present 10 invention is to provide a system for providing emergency relief location information using a mobile communication network, capable of notifying location and situation information of a given mobile communication subscriber who is placed in an emergency situation through a mobile 15 communication terminal of a given relief personnel adjacent to the place where the emergency situation has occurred. Another object of the present invention is to provide a system for providing emergency relief location information using a mobile communication network, which can prevent in 20 advance illegal deposit withdrawal by stopping a transaction of financial accounts owned by a given mobile communication subscriber in case of emergency. Still another object of the present invention is to provide a system for providing location information using a mobile 25 communication network, which can provide location information that allows the location among the mobile communication subscribers to be easily found through the satellite communications and the mobile communication network.
